

New Coalition Receives Support of MP in Urging Government for Genetic Discrimination Protections *Motion put forth in House of Commons*

(Ottawa) October 6, 2009 - Who has perfect genes? Genetic discrimination affects us all!

Today MP Judy Wasylycia-Leis, Winnipeg North, put forth a motion in the House of Commons urging the government to develop and implement anti-discrimination protections with respect to genetic information. This motion supports the work of the Canadian Coalition for Genetic Fairness

The Canadian Coalition for Genetic Fairness (CCGF) is a group of 14 organizations dedicated to establishing protections against genetic discrimination for all Canadians. Our mission is to educate Canadians about genetic discrimination and to influence federal and provincial governments, and other relevant organizations, to create positive change.

In her motion Wasylycia-Leis states that, "That, in the opinion of the House, the government should develop and implement anti-discrimination protections with respect to genetic information, including, but not limited to, information gathered through genetic testing and family history, that include a) effective enforcement mechanisms, b) a standing body mandated to document cases, evaluate the effectiveness of anti-discrimination protections, and make recommendations to the government about the uses of genetic information and direct-to-consumer testing, and c) a public awareness campaign to focus attention on the issue of genetic discrimination and its link to genetic testing and research."

"We are very pleased to have the support of Judy Wasylycia-Leis, and hope her motion in Parliament brings awareness, attention and further support to this critical issue," says Don Lamont, Chair of the Canadian Coalition for Genetic Fairness.

Groundbreaking advances in genetic testing have created a host of benefits and pitfalls for Canadians facing the possibility of a genetic disease or disorder. Being rejected for employment, losing a current job or being forced into a lower-paying position, or being denied essentials like mortgage, life and disability insurance are just a few of the fears faced by Canadians who undergo predictive tests.

Though other countries, including the United States, the United Kingdom, Germany and many other EU countries, have taken important steps towards eliminating genetic discrimination, Canada is falling behind. But CCGF is working hard to bring a necessary level of protection to Canadians, aiming to ensure that genetic data is used properly without fear of repercussion. The new strategy would prevent employers and insurers from pushing applicants to take genetic tests or using genetic information or family histories for the purpose of assessing the applicant's risk of becoming a liability by being disabled at some point in future.

The issue is a critical one. As research advances, more and more is being discovered about the genetic origins of disease and disability, including who might get what disease some day. "Our practices in business, commerce and in the home must keep pace so people are protected from incomplete information and inappropriate usage", says Jo Anne Watton, Director of Individual and Family Services with the Huntington Society of Canada. "Who among us has perfect genes?" Jo Anne points out. "Everyone could be at risk."
